

# Installations

## Foundations Course

### Introduction

If you are already using **MacOS**, **Ubuntu**, or [an official flavor of Ubuntu](#) as your operating system and have **Google Chrome** as an installed browser, you can skip this section. Otherwise, click on the small arrow to the left of the method you would like to use below to expand that section, and then follow the installation instructions.

We can only support the operating systems indicated above. Our instructions have been tested with MacOS, Ubuntu, and official flavors of Ubuntu. We do not recommend installing an OS that is only based on Ubuntu (like Mint, Pop!\_OS, ElementaryOS, etc).

### OS Installation

#### IMPORTANT

This curriculum only supports using a laptop, desktop or supported Chromebook. We cannot help you set up a developer environment on a RaspberryPi or any other device.

► **Virtual Machine (Recommended)**

► **Ubuntu/Windows Dual-Boot**

## ► Chrome OS/CloudReady

# Google Chrome Installation

## Why Google Chrome?

Because our lessons use Google Chrome, and Chrome/Chromium are overwhelmingly used by developers and consumers, the recommendations we make are very intentional. Look at this [usage share of web browsers](#) and see what other folks are using the most.

Choose your Operating System:

## ► Linux

## ► MacOS

## Additional Resources

This section contains helpful links to related content. It isn't required, so consider it supplemental.

- It looks like this lesson doesn't have any additional resources yet. Help us expand this section by contributing to our curriculum.
